Flash Codes Needed

Please provide the number of flash codes needed for each model number. Note that the same model number could have different flash codes. You may also have the same flash code in different model numbers.

Do not mix the entry, if the model number and flash code doesn't match, the flash won't work.

The example to the right shows an XTS2500 radio. The model number is H18UCF9PW6AN and the flash code is 500008-000002-9. This information can be found in the Astro25 codeplug by opening the "radio information" window for both items.

Quantity	Model Number	Flash Code

Motorola Flash Information

- To determine if your radio is capable of being flashed to P25, type your flashcode into the tool located at <http://www.akardam.net/moto/tools/decode4.pl?do=flashcode>
- For XTS2500 you need the Interoperability option to run both SmartZone and P25 systems.

Motorola Radios that CANNOT be flash upgraded to P25

Mobiles	
Model	Serial Number Series
Spectra	581XXXXXX
Spectra Consolette	761XXXXXX
